# CARBON MARKETS: OFFSETTING EMISSIONS

## Description

Climate change is the main environmental challenge we are facing at a global level. Its consequences are becoming more evident every day and no population is immune to the problem.

Environment and CR

e-Learning

In an effort to minimise the consequences of climate change, various initiatives and tools have been developed.

One such example can be found in carbon markets: trading systems through which governments, companies or individuals can sell or buy greenhouse gas emission reductions.

## Qualification

Once you have successfully completed the training course, you will be awarded the following certificate:

- Carbon Markets: Offsetting Emissions.

This certificate will be issued by Bureau Veritas Business School.

## For whom is this course intended?

This course is intended for:

- Executives, managers, technical and administrative staff in the environmental sector, even without being trained in climate change, who have responsibilities in industrial management related to the minimisation of environmental impact.
- Entrepreneurs and professionals in the environmental sector who aspire to take on new responsibilities in industrial environmental management and in the requirements for minimising climate change.
- University graduates who wish to acquire a solid background in the field of carbon markets.
- Anyone interested in learning about carbon markets.

## What will you achieve with this course?

After completing this course, you will be able to:

- Assess the issue of climate change and understand the importance of combating the problem.
- Understand the current and future situation of carbon markets.
- Analyse the evolution of carbon prices.
- Understand the financing mechanisms for national and international projects.
- Recognise the different projects and tools for offsetting emissions.

## Why does Bureau Veritas recommend this course?

In order to meet our needs, large quantities of products have to be generated, which leads, among other things, to the generation of high levels of greenhouse gases (GHG).

As a result, the world as we know it is changing. Every year maximum temperatures are higher, droughts are longer, extreme weather conditions are more frequent, and wildfires are fiercer.

It is therefore necessary to reduce the environmental pressures generated by our activities! This is why companies must make use of tools such as carbon markets, which minimise the GHGs emitted, thus combating climate change.

## Programme

1. Effects of climate change.
2. International actions and legislation on climate change.
3. Current and future status of carbon markets.
4. Offsetting emissions.
5. Opportunities for offsetting emissions.

## BLOCKCHAIN DIGITAL CERTIFICATE

This verification system, through the inclusion of a QR code in the final document, allows you to share with third parties, using a simple link, all the information of your certificate. This information is validated and confirmed in the system's secure and immutable network, preventing any type of falsification.
