Description

This course will equip you with the skills needed to plan, organize, and implement a quality management system based on ISO 9001, and to carry out internal audits to verify the effectiveness of the system, following the guidelines of ISO 19011.

In an environment where operational excellence and customer satisfaction are critical competitive factors, having trained internal auditors is essential for any organization committed to quality. This course combines solid theoretical foundations with practical exercises and real-world case studies, providing you with the methodological tools needed to master quality management system auditing techniques and add value to your organization's continual improvement processes.

Certification

Upon successful completion of the training program, participants will obtain the following certificates:

- Internal Auditor Course in Quality Management Systems ISO 9001:2026, issued by Bureau Veritas Business School.
- Internal Auditor of Quality Management Systems ISO 9001:2026 Certificate (with examination), issued by Bureau Veritas.

Who is this course for?

This course is aimed at professionals interested in implementing, managing, or improving quality management systems in accordance with ISO 9001 and carrying out internal audits following the guidelines of ISO 19011. It is especially aimed at:

- **Quality department professionals** involved in the implementation, maintenance, and improvement of their systems.
- **Quality managers and middle managers** who lead the supervision and monitoring of the management system's performance.
- **Technical staff and process owners** involved in the management, control, and improvement of the organization's activities.
- **Internal auditors** who need to update or strengthen their competencies in conducting quality audits.
- **Consultants and professionals** interested in the design, implementation, and evaluation of management systems in accordance with ISO 9001:2026.

What will you achieve with the course?

- Understand the concepts, principles, and requirements of ISO 9001:2026, identifying the key factors for the implementation, maintenance, and continual improvement of a Quality Management System.
- Participate in the planning, implementation, and management of Quality Management Systems, contributing to continual improvement and customer satisfaction.
- Plan, conduct, and document internal quality audits in accordance with the guidelines established in ISO 19011, evaluating the conformity and effectiveness of the management system.
- Apply auditing techniques to verify compliance with system requirements, identify nonconformities, and detect opportunities for improvement in any type of organization.
- Assume responsibilities throughout the various stages of the audit process and understand the roles, responsibilities, and competencies required of a Quality Management System Auditor.

Why does Bureau Veritas recommend it?

Internal auditing is essential for verifying the proper functioning of a quality management system and supporting its evolution.

Our experience evaluating organizations across different sectors shows that those with trained internal auditors can easily identify areas for improvement, optimize their processes, and strengthen customer satisfaction, ensuring compliance with the requirements of ISO 9001:2026.

In an increasingly demanding environment, having professionals who can objectively assess organizational performance is essential for improving competitiveness and building trust among customers and other interested parties.
